LEAD SENIOR DEVOPS ENGINEER

Spent **12 years** developing the skills to increase velocity, reliability, and quality with a high focus on security. Deep experience with Azure, Docker, Kubernetes, and Observability, helping organizations instill DevOps for the modern age.

PROFESSIONAL EXPERIENCE

Lead Senior DevOps Engineer **2022-Current**
New Look

- Led the transformation of software delivery for the Fabric project, transitioning from monthly releases to on-demand delivery, meeting a critical business metric for rapid feature deployment and competitive advantage.
- Pioneered the adoption of a shift-left approach for software releases, embedding quality assurance earlier in the development lifecycle, resulting in faster release cycles and reduced post-production defects.
- Championed the DevOps culture across the Fabric project and the wider organisation, streamlining collaboration between development and operations teams, leading to increased deployment frequency and enhanced system reliability.
- Drove continuous improvement initiatives, implementing automation pipelines that minimised manual intervention, significantly reducing deployment times and improving system uptime across New Look's e-commerce platforms.
- Mentored engineering teams in best practices for CI/CD and cloud automation, scaling New Look's capabilities in DevOps and improving team productivity across multiple departments.

Senior DevOps Consultant **2021-2022**
Equal Experts

- Led cross-functional teams in managing cloud infrastructure for high-profile clients like John Lewis, Waitrose, and O2, ensuring seamless operations on both Azure and AWS platforms.
- Mentored junior engineers across client projects, fostering a culture of continuous learning and enabling teams to adopt best practices in cloud management, security, and automation.
- Developed and implemented cloud governance frameworks, guiding client teams in establishing scalable, secure, and cost-effective cloud solutions, while ensuring knowledge transfer to internal staff for ongoing platform maintenance.
- Facilitated leadership workshops, equipping team leads from John Lewis and Waitrose with advanced skills in DevOps practices and cloud-native infrastructure, accelerating their digital transformation journeys.
- Oversaw the migration of critical services to Azure and AWS for O2, coordinating efforts between internal client teams and external partners, while mentoring client leadership on optimizing platform performance and scalability.

Siemens PLM **2018-2021**

Senior DevOps Engineer

- Siemens Mindsphere is an Industry Leader in IIOT and Digital Twin.
- Hand-holding teams to move from Application Service Environment to Azure Kubernetes Services
- Established CI/CD Pipelines from Scratch for a multi cloud environment
- Orchestrated Observability Stack using Azure built in tools as well as
- Grafana-Prometheus stack
- With my cost optimization project I saved up to $1.5 mil per year on
- our Azure infrastructure
- Worked on Azure Devops to deliver more than 50 services - Working with development teams to re-home about 80 micro-services
- Working with development teams to re-home about 80 micro-services

Siemens PLM **2013-2018**

Software Engineer

- Worked as an integral part of Cloud inception team which was responsible for delivering MindSphere PAAS.
- Automated software and infrastructure deployments for over 32
- micro-services across 4 lines of business
- Migrated over 40 Applications instances from on premise
- infrastructure to Azure Public Cloud
- Dramatically reduced development overhead by removing over
- 50,000 lines of deprecated code from the baseline of a $1.2M project
- Ensured availability of Production and Development systems mostly
- based on Azure- VM and AKS

Siemens PLM **2012-2013**

Java Developer

- Siemens PLM Software is an Indian software company that develops
- Teamcenter® software is a modern, adaptable product lifecycle management PLM system that connects people and processes, across functional silos, with a digital thread for innovation
- Created more than 50 technical design documents and implemented business logic for 20 features
- **Worked on an Android application which was selected for Patent registration (Code Review Application)**

EDUCATION

University of Pune

Bachelor of Engineering Computer Science

KEY COMPETENCIES

- Agile Transformation
- Shift-Left and Quality-First Mindset
- Process Automation and Optimisation
- Product Innovation & Lifecycle Management
- Vendor Management
- Business-Driven Technology Solutions
- Cloud Architecture & Infrastructure
- Microservices & Scalable System Design
- Technical Leadership & Mentoring
